Performances on slopes

D1 can overcome slopes up to 30%, but the load it can carry **may vary based on:**

- **terrain** on which the load is carried;
- **slope level;**
- **wheels.**

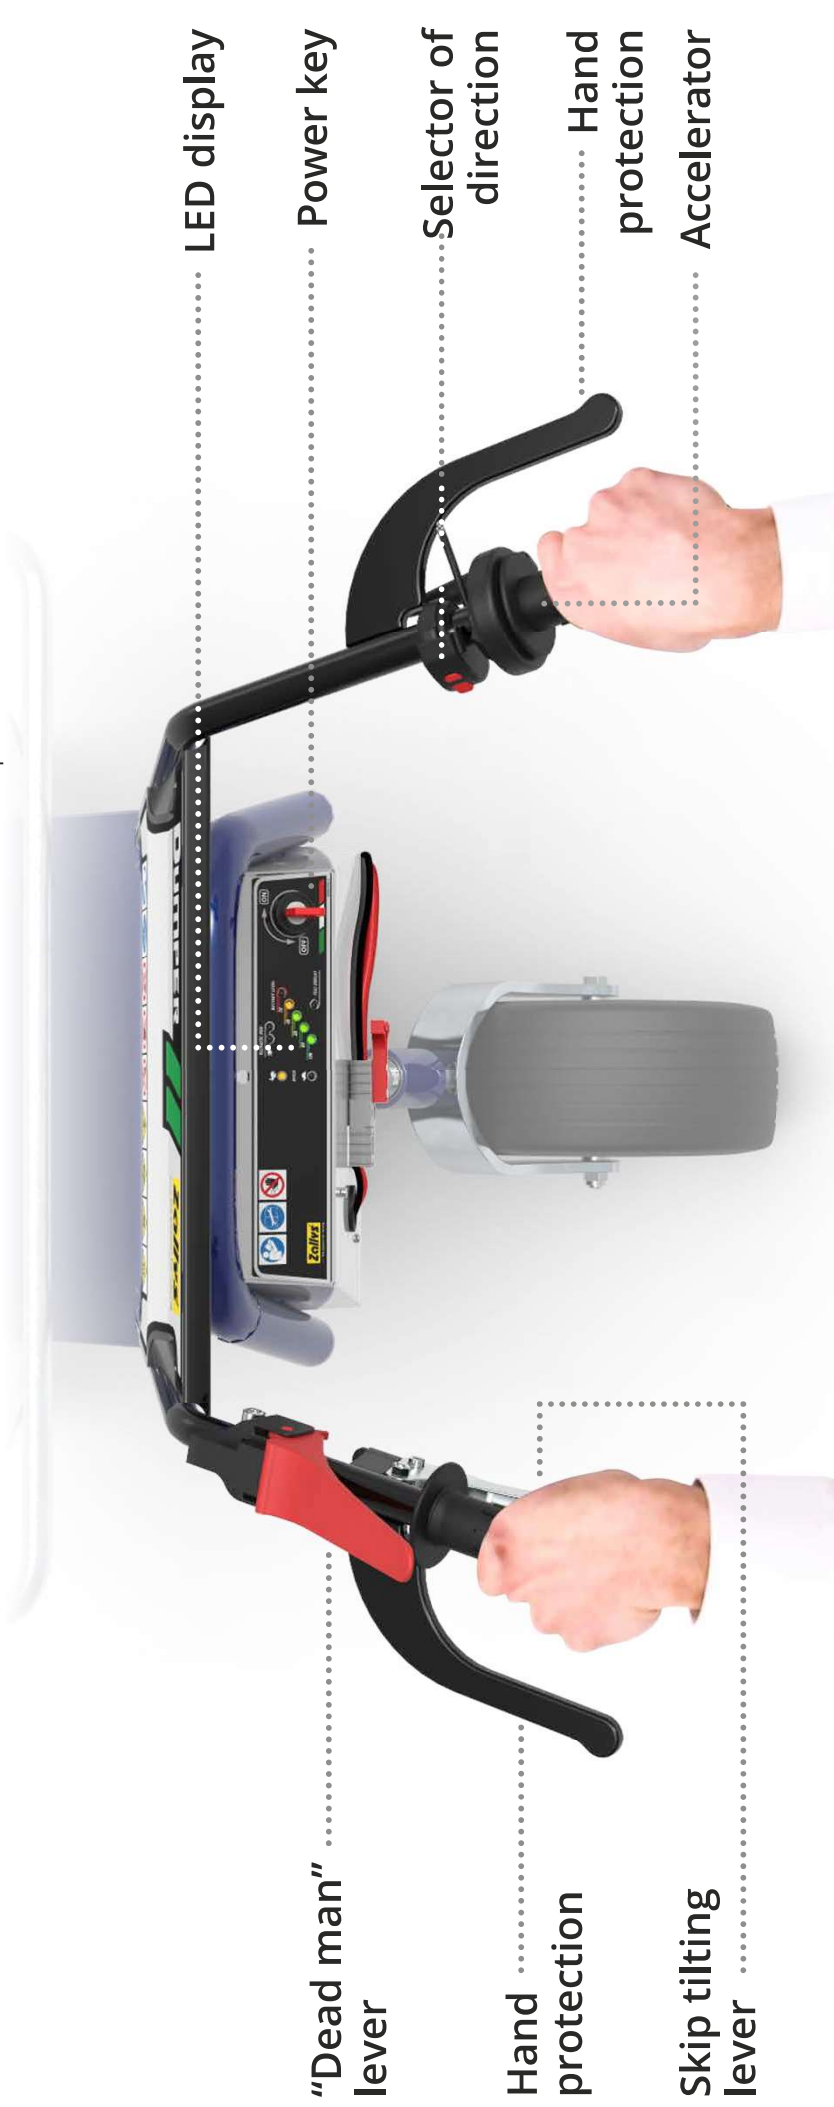

Ergonomic driving

D1's **driving system** is designed to make the use of the machine more ergonomic for the operator, guaranteeing great **comfort on a prolonged use** during the work shift.

All the controls are at your fingertips, and on the LED display are always visible the battery charge level and the direction; the power key is on the right side for a fast and easy ignition.

The **structure** is made of **resistant materials** in case of accidental bumps.

The right wheels for every need

D1 is equipped by default with **pneumatic tractor wheels**, suitable mostly for an outdoor use, ideal on muddy and uneven terrain to always guarantee the maximum grip and a low level of vibrations. Moreover, they're very resistant and offer exceptional performances on any type of ground.

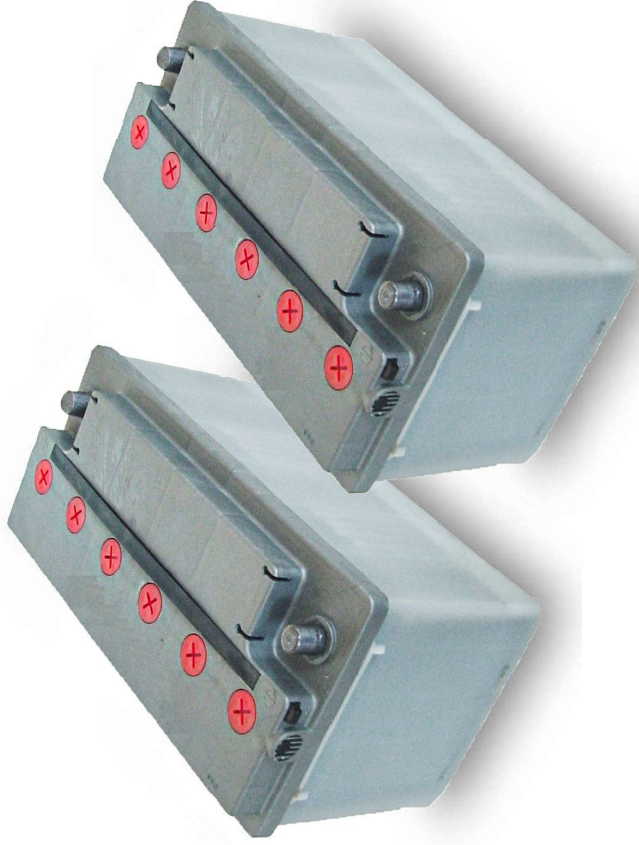

On request, it is possible to equip other kinds of wheels, like the turf tires for both indoor and outdoor use, or the "**superelastic**" **non-marking wheels**, for the delicate floorings.

Autonomy for a full working day

D1 is powered by two 72 / 96 Ah batteries, which guarantee the machine for **8 continuative working hours operation.**

Thanks to the high frequency external battery charger, the batteries are easy to charge.

Loading platforms and skips for every need

HS4 has a wide range of **different sized loading platforms and skips** to fulfill every transport need, from the maintenance of industrial implants to the construction sites.

Applications

on various productive sectors
